Attached are 2 documents from our consultants, for your review prior to our meeting at 12:30 pm on December 4 at the Parker-Lincoln Building. The draft technical memorandum from Camp Dresser and McKee includes the data and analysis you requested along with some additional information about the total project environmental impacts related to use of each of the potential WRF sites. The impacts are based on those that have been of most interest to agencies and the public to date. They have also included a recommended public input data collection plan.
